ABOUT THE TRANSPORT DATA CENTRE

The Transport Data Centre (TDC) provides data on current and forecast travel patterns for the people of the Greater Metropolitan Region as inputs to transport and land use planning and policy making. The TDC's main data sets include:

- Home Interview Survey 1971, 1981, 1991/92
- Household Travel Survey 1997, 1998, 1999, 2000, 2001
- Commercial Vehicle Survey 1991/92
- Commercial Transport Study 1996
- Land use (population and employment) projections 2021-2026
- Journey to Work (JTW) data derived from the Australian Bureau of Statistics (ABS) Census of Population and Housing 1981, 1991, 1996, 2001

1. EXECUTIVE SUMMARY

1.1 KEY THINGS TO KNOW BEFORE USING THE JTW DATA

The Journey to Work (JTW) data is derived from the Census of Population and Housing, conducted every 5 years by the Australian Bureau of Statistics (ABS). The key information provided in the 2001 JTW data set is:

♦ Small area (Travel Zone) counts of employment for the Sydney Greater Metropolitan Area (GMA). See map in Appendix 9.

♦ Statistical Local Area (SLA) (and in some cases split SLA) counts of employment for Rural and Regional NSW (RRNSW). See map in Appendix 9.

♦ Origin (place of enumeration), Destination (work location), method of travel to work on Census day for all of NSW, plus industry and occupation information.

1.1.1 2001 Scope

GMA Employment counts include all employed persons reporting a workplace address in the GMA, regardless of where they live in Australia or where they were on Census night.

RRNSW Employment counts include all employed persons reporting a workplace address in RRNSW, regardless of where they live in Australia or where they were on Census night.

Method of Travel to Work refers to the mode of transport used to get to work on Census day. This may not be the usual mode of transport.

1.1.2 Comparing 2001 JTW with 1996 JTW

A number of issues should be considered when comparing JTW data over time:

Travel Zones: zone boundaries have changed to account for land use changes as well as to reflect ABS CD and SLA boundaries. Sydney CBD and the Central Coast are the areas most affected. A Travel Zone concordance is available from TDC to convert 1996 Travel Zones data to the equivalent 2001 Travel Zone level.

GMA Employment: The 1996 JTW *included* employed persons staying in the GMA on Census Night, even though their workplace address might have been outside the GMA. In this case workplace was coded as outside the GMA. These records should be excluded from 1996 data for comparison with 2001. The 1996 JTW *did not include* employed persons with a workplace in the GMA if they were not in the GMA on Census night. They should be excluded from 2001 JTW for comparison with 1996.

RRNSW Employment: There was no RRNSW employment destination data prior to 2001.

Employment Address: The basis of the JTW data set is the coding of employment address to a Travel Zone or SLA. In 2001 the work address question asked for the *person's* workplace address, not the *employer's* address, as in 1996. The aim was to more accurately code people's actual work address, rather than a *head office* address. The 2001 data will be more accurate but as a result some zones may show artificial growth or decline in employment. The extent of this effect cannot be precisely quantified.

Method of Travel to Work: Ferry and Tram, which were coded together in 1996, have been separated for 2001. Truck has become a separate mode, which would previously have been coded to 'car driver/ passenger' or 'other' mode.

Industry/Occupation of Employment: The industry (ANZSIC 1993 edition) and occupation (ASCO 2nd edition) classifications were used for 1996 and 2001 Censuses.

1.1.3 Comparing TDC JTW and ABS JTW data

If a person does not report their full employment address in the Census, their employment destination cannot be coded to a Travel Zone. In these cases, the ABS codes them to a general locality (if for example they reported the suburb "Gordon" without the street name and number), or to a general street code (if they reported working in "George St, Sydney", which runs through many Travel Zones. This is how ABS JTW data is supplied to TDC.

The TDC adds value to the JTW data by allocating the employment for these imprecise destinations to the most likely travel zone, based on the characteristics of the zone and the person's reported industry and mode. This process is designed to ensure that SLA and Travel Zone totals are consistent across tables.

1.1.4 Comparing Census and Labour Force data

The Census provides the only small area counts of employment at the destination or workplace end. It also has the advantage that this data can be linked to the full range of population statistics also collected in the Census. Differences in method mean that employment figures from the Census are different from the official employment figures produced by the Monthly Labour Force Survey. In particular the Census is subject to a degree of under count, which leads to underestimates of employment. The MLF adjusts for such things as under count.

	2001 Census	Aug 2001 LFS
GMR	2,155.0	2,420.3
NSW	2,744.0	3,051.0

These methodological differences are outlined in detail in the *Working Paper: Labour Force*, produced by ABS after each Census.

1.2 FORMAT OF JTW USER GUIDE

Section 2 of the documentation lists the variables in each of the 29 JTW **tables**, including the data format and a brief description of the variable.

Section 3 provides the list of categories, or **code frames**, for each variable.

Section 4 provides **background** information about the data, its collection and processing.

Section 5 discusses the issues to consider when **comparing 2001 and 1996** JTW data.

The Appendices contain detailed variable codes and equivalences.

2. 2001 JOURNEY TO WORK TABLES

2.1 OVERVIEW

2.1.1 The JTW Data Set

The 2001 JTW data set contains 29 independent tables, each with a different combination of variables. These tables are listed in Section 2.2. A more detailed list of the variables within each table then follows in Section 2.3.

Every JTW table contains a variable (or column) called 'freq'. This is short for *frequency*, and represents the *number of employed people* with the set of characteristics in that row of the table.

2.1.2 Greater Metropolitan Area (GMA) and Rural & Regional NSW (RRNSW) tables

Tables 1 to 21 cover all employed persons with a workplace address inside the *Sydney Greater Metropolitan Area* (GMA), which covers Newcastle Statistical Sub-division, Sydney Statistical Division and the Illawarra Statistical Division.

Tables 22 to 25 cover employed persons with a workplace address within NSW, but outside the GMA, an area referred to as *Rural and Regional NSW* (RRNSW).

Tables 26 and 27 cover all employed persons with a workplace address in NSW, either in the GMA or *RRNSW*.

Table 28 consists of employed persons with both an origin and destination within the GMA.

Table 29 is for *all households in NSW*, regardless of whether the household contains an employed person.

2.1.3 Travel Zones and Statistical Local Areas

JTW destination data is provided at the Travel Zone (TZ) or Statistical Local Area (SLA) level within the GMA. Outside the GMA, destinations are at the SLA level, with some SLAs in larger regional centres further split into 'Main' and 'Other'.

JTW origin data is coded to CD, TZ or SLA in the GMA and SLA in the RRNSW area.

Each table provides the additional geographic variables of SLA, SSD and SD. TDC can provide a concordance between 1996 and 2001 TZs. Digitised boundaries and hard copy maps at a range of geographical levels and for different years are also available from TDC.

5. Methodological Issues

5.1 OVERVIEW

This Section provides details on methodological issues, which provide valuable background to understanding and analysing the 2001 JTW data.

The JTW data is derived from Census of Population and Housing, which is carried out by the Australian Bureau of Statistics (ABS) every 5 years. Data for the JTW collection is obtained from a number of work-related questions in the Census (see Appendix 6). If a person reports that they had a full-time or part-time job in the previous week they are then asked to complete a series of additional questions, relating to type of employment, occupation, industry of employer, workplace address and method of travel to work.

The JTW data set for NSW provides information on the trip to work made on Census day by all employed persons in NSW. In addition to mode(s) of travel to work and key demographic and household characteristics, the JTW also provides origin and destination data coded to TDC Travel Zone. It is thus the richest source of small area employment information available for NSW.

5.3 GEOGRAPHIC SCOPE

For the 2001 Census, the scope of the JTW data was expanded to include all employed people in Australia.

In previous censuses, JTW data was limited to a State-defined 'Study Area'. Thus, in the 1996 Census, the scope was restricted to employed people *enumerated* in the TDC Study Area (equivalent to the Sydney Greater Metropolitan Area). For the 2001 Census, JTW data for all employed persons in NSW will be available.

Two regions, the *Greater Metropolitan Area* (GMA) and *Rural and Regional NSW* (RRNSW) have been defined for NSW reporting of the 2001 JTW. GMA information is available to travel zone level. RRNSW information is available to SLA (and split SLA) level.

5.4 VARIABLE DEFINITIONS

5.4.1 Definition of 'Employed' persons
Whether a person is counted as employed or not is based on their answer to the question

- *Last week*, did the person have a full or part-time job of any kind?

If the person worked for 1 hour or more, had a job but was on leave or worked unpaid in a family business, they then proceed to answer further work related questions about their *main job*.

This is comparable to the definition of employment used since 1996 in the Monthly Labour Force Survey, from which ABS derives the official employment figures. This definition is in line with international conventions. It should be noted however that differences in employment estimates can be expected from the Census and LFS, due to the different methodologies used. In particular the Census tends to slightly under count employment.

An analysis of the differences between Census and LFS employment estimates will be

available from the ABS in mid 2003. The *1996 Census Working Paper: Labour Force Status* also discusses these issues and is available free from the ABS website.

5.4.1   Definition of 'Origin'

A key aspect of the Census is that it aims to count the population where they are on Census night and most Census data is reported for 'place of enumeration' or 'where the person was on Census night'. It is also much simpler and more reliable for the place of enumeration to be recorded to CD by the Census Collector, than to try to ascertain each person's usual address.

For the purposes of the JTW data, the origin of the journey to work trip is also derived from the 'place of enumeration'. Although most people are at home on Census night many are away from home for business or recreation. A person's usual journey to work origin may therefore be different to that reported for Census Night.

5.4.2   Definition of 'Destination'

JTW destinations are derived from answers to the question:

- **For the main job held *last week*, what was the person's workplace address?**

Reported addresses are coded to travel zone or SLA, based on detailed address, locality and facilities indexes constructed by the state transport agencies for ABS.

5.4.3   Definition of 'Mode'

The JTW mode is derived from the question:

- **What mode(s) did you use to get to work on Census day?**

All modes used are selected from a list of 10 plus 'Other'. For each person ABS codes up to 3 modes giving about 230 possible combinations (see Appendix 6). It is important to keep in mind that this may not be the person's usual mode of travel to work.

5.5   JOURNEY TO WORK 'ANOMALIES'

Once the precise definitions for 'origin', 'destination' and 'mode' are understood, it can be seen that the JTW data can produce seemingly impossible origin and destination pairs and improbable modes for some trips to work.

A journey to work is constructed from the usual workplace address for the main job held last week, the place of enumeration on Census <u>Night</u> and the mode used to get to work on the morning of Census Night can give rise to strange scenarios:

> A person lives in Gosford and travels to work in Sydney each day. On Census day the person attended a work conference in Gosford, rather than go to their usual workplace address in Sydney. The conference was close to home, so the person walked. This produces a trip from Gosford to Sydney by foot.

5.6   JOURNEY TO WORK PROCESSING

Processing of all work-related questions in the Census is undertaken solely by ABS, with the exception of 'workplace address', which requires input from State agencies to allow for

coding to a smaller geographical unit than SLA. In NSW, TDC is responsible for this input, supplying a detailed search index that facilitates ABS coding of addresses to *Destination Zone*s or TZs. The importance of this process is that it provides a complete enumeration of employment at the small-area level for the GMA.

During 2001 JTW processing, workplace address was coded by ABS to TZs based on TDC's detailed indexes for the GMA. A list of the TZs and SLAs in the GMA can be found in Appendix 2.

If the workplace address is in RRNSW, addresses were only coded at SLA level with the exception of some SLAs, which were further split into 'Main' and 'Other'. Thus, instead of a TZ field, there is a Split SLA field, which either provides the SLA code (if not split), or the Split SLA (8000 series) code. The splits were based on locality names.

5.8 ADDRESS CODING

The quality of JTW zone coding is only as good as the quality of the addresses reported and the indexes used to code them. As the Census is a *self-completion* collection, inadequate address reporting makes it difficult to code employment addresses to a travel zone. This results in less accurate zone level employment counts. Address reporting problems include:

1 No address supplied: allocated the code for 'Not stated'.

*2 Incorrect a*d*dress* is inadvertently reported. In this case the address may be codeable but will be wrong. The extent of such hidden error is unknown.

3 Address is incomplete: insufficient information to allow for accurate detailed coding but can be allocated to a general locality

4 Address is complete but imprecise: A general rather than a specific area is reported, such as 'The Rocks' or Parramatta CBD or George Street Sydney.

In the case of 3 and 4, ABS allocates a general locality or street 'dump' code. In such cases, TDC analyses this data and undertakes an imputation methodology to assign the incomplete address to a Travel Zone.

- Identify 'candidate' zones for each locality dump zone

- Assign proportions for each candidate zone based on industry and mode data

- Distribute locality dump zone counts based on these proportions

This process is designed to ensure that all TZ and SLA totals remain consistent across different tables. However this cannot be perfectly achieved by the distribution process due to the ABS policy of randomising small table cell counts in order to ensure confidentiality.

5.10 CONFIDENTIALITY

To protect the confidentiality of individual Census respondents, the ABS does not provide unit-record data. Instead, aggregate data is provided in a number of tables with different combinations of variables. To further ensure confidentiality, ABS undertakes a process of random perturbation on any table cells containing less than 4 people. Table cells originally containing 1 or 2 are randomly assigned the value of 0 or 3. Any cells containing 1 or 2 in the final JTW tables are the result of TDC's locality dump distribution process.

As a result of the ABS randomisation process, there will be slight variations in totals compiled from different tables. and even table totals differ slightly across ABS JTW tables, as each table is independently randomised.

6.   COMPARING 2001 & 1996 JOURNEY TO WORK DATA

When comparing data from the 2001 and 1996 JTW datasets, a number of factors should be kept in mind that can influence the interpretation of apparent trends. This is due to differences in scope and definitions between the two data sets, as well as improvements in the indexes used to code 2001 destinations. Direct comparison of 2001 and 1996 data may occasionally show 'changes' in employment that are in fact the result of the scope, definition and processing differences between 1996 and 2001.

Some of these effects cannot be quantified but should nevertheless be kept in mind. These differences are outlined below.

6.1   SCOPE OF JTW TABLES

The scope of the JTW is defined in terms of where people work ('destination'), as well as where they live or where they were counted on Census Night ('origin') as outlined in *Section 5.4: Variable Definitions*

In previous censuses, JTW data was limited to a State-defined 'Study Area', covering the main metropolitan area of the capital city in each state. For NSW, the Study Area covered the Sydney Greater Metropolitan Area (GMA), which includes the Blue Mountains, Central Coast, Lower Hunter and the Illawarra.

From 2001 all employment destinations are coded wherever people work in Australia. These destinations are coded to the detailed travel zone level within the state-defined Study Areas and to SLA level over the remainder of the State.

In past years the JTW scope was also defined in terms of whether the person was counted in the Study Area. In 1996 the JTW the scope was restricted to employed people *enumerated* in the TDC Study Area, irrespective of their destination. For 1991 employed people were only counted if they both lived and worked in the Study Area. For the 2001 Census, JTW data for all employed persons in NSW will be available even if they were enumerated in another state.

Comparability between 2001 and 1996 is enhanced by removing all persons with a workplace address outside the GMA from the 1996 JTW, and removing all persons with an origin (place of enumeration) address outside the GMA from the 2001 JTW.

No data is available for RRNSW prior to 2001.

6.2   6.2 CHANGES IN THE EMPLOYMENT QUESTIONS

Between 1996 and 2001, there were changes in the wording of the employment questions, to improve data quality and increase comparability with the Labour Force Survey. These resulted in some changes in the way the data was collected and processed, which impact on data comparisons over time.

6.1.1 Workplace address

In Censuses prior to 2001, a person's 'Workplace address' for JTW purposes was actually their *employer's* workplace address. For example, in the 1996 Census, the following question was used to obtain workplace address:

- **For the main job held *last week*, what was the employer's workplace address?**

The problem with obtaining workplace address in this way was that people often reported their employer's 'official' or 'head office' address, and *not the address (e.g. a branch office) where the person actually worked.* In such cases, the resulting destination code could be totally misleading, with significant 'employment" being recorded in head office locations that rightly belonged elsewhere. As an example, under this methodology it is likely that a significant number of teachers were recorded as working at the Department of Education Head Office in the Sydney CBD rather than at the school where they actually worked.

The 2001 Census asked for the person's usual workplace. While it was anticipated that this question would produce more accurate employment destination data for 2001, TDC cannot at this stage quantify to what extent to which this did so.

6.1.1.2 No fixed address

People with jobs that involve them going to a different location each day, such as plumbers and couriers, are asked to respond to the workplace address question with 'no fixed address'. In 2001, an instruction for persons with no fixed place of work to provide a depot address (if applicable), was added.

6.1.2 Employment Industry

Changes were made to the way industry of employment was recorded for the 2001 Census in order to improve the efficiency and accuracy of industry coding. The 1996 Census asked:

- **For the main job held *last week*, what was the employer's workplace address? and**

- **What kind of industry, business or service is carried out by the employer at that address?**

The way that industry was coded depended on the type of detail supplied by respondents. The 2001 Census asked:

- **Which best describes the business of the employer?**

    [ ] Manufacturing
    [ ] Wholesaling
    [ ] Retailing (incl. take-aways)
    [ ] Accommodation, Cafes & Restaurants
    [ ] Community & Health Services
    [ ] Other (please specify)

- **What are the main goods produced or main services provided by the employer's business?**

It is not possible to estimate the impact of these changes on comparisons over time. The ABS will release a Working Paper on the Journey to Work related questions from the Census and the effect of changes over time in mid 2003.

6.1.2 Mode of Travel to Work

For 2001 the category Ferry/Tram was split so that these modes could be counted separately. To compare with 1996 mode usage, the 2001 counts for these modes should be added together.

6.2 STATISTICAL LOCAL AREA AND TRAVEL ZONE CHANGES

6.2.1 Statistical Local Area changes between 1996 and 2001

ABS revised its geographical classification before the 2001 Census, splitting a number of SLAs and SSDs. TDC Travel Zones always build to unique SLAs. Within the GMA the changes were:

Blacktown SLA (0750) to:	Blacktown North (0751)
	Blacktown South-East (0752)
	Blacktown South-West (0753)
Sutherland SLA (7150) to:	Sutherland East (7151)
	Sutherland West (7152)
Shoalhaven SLA (6950) to:	Shoalhaven-Pt A (6951)
	Shoalhaven-Pt B (6952)

6.2.2 Travel Zone changes between 1996 and 2001

Before the 2001 JTW, TDC undertook a significant review of its Travel Zone Classification. Some zones were split or had their boundaries redesigned in order to better reflect current landuse. The most significant changes were in the Sydney CBD and the Central Coast, with the latter in particular undergoing major redesign.

A good example of the necessity for boundary redesign in 2001 due to landuse change over time was in the Erina region, where the Erina Fair shopping area had grown to the point where it straddled two 1996 zones, 1692 and 1695. Consequently, for 2001 TDC redesigned the boundaries for this region, and created a new zone 1733, wholly containing the Erina Fair shopping area. There are many other examples for the Central Coast region in particular.

Because of the high level of boundary redesign in 2001 (involving more than simple splitting of zones into two), it is not possible to provide a simple mapping of 1996 and 2001 zones, as was provided for the 1996 JTW. If comparisons between 1996 and 2001 JTW data are required for affected areas, it is necessary to use an equivalencing technique based on a special table created by TDC for this purpose. However, a brief description of key zonal changes is shown in Appendix 1.

6.3 EXTENDED STUDY AREAS

The 2001 JTW collection includes counts of people employed in each SLA in NSW. Within Rural and Regional NSW (RRNSW) the extent of small area coding for employment locations is restricted to the splitting of SLAs.

Prior to the 2001 Census, ABS agreed to code employment destinations outside the GMA to split SLAs on the basis of locality names. This involved allocating specified localities to the main employment centre or main part of the SLA All other localities were coded to 'Other' within that SLA.

As part of the process of index compilation for the 2001 JTW, TDC approached councils outside the GMA, offering them the option of obtaining JTW data at a *split-SLA level.* Those Councils who responded supplied TDC with a list of locality names and the respective split-SLA category to which they belonged.

As these splits are based on reported locality names, and are not defined by a formal geographic boundary they cannot be precisely mapped.

6.4   ANALYSIS OF APPARENT EMPLOYMENT CHANGES

During the JTW validation process, TDC investigated cases where there appeared to be significant 'movement' of employment between 1996 and 2001. In some cases this change was actually the result of improvements in the address coding indexes in 2001, and thus an artefact of processing, rather than a reflection of genuine employment change. A summary of the most important of these and how they were treated follows.

TZs 565 and 566 (Manly area): An error in the 1996 index meant that much of the employment for Manly Hospital went to TZ 565 rather than the correct TZ 566 (adjoining zone). This error was corrected for 2001.

TZs 360 and 714 (Liverpool area): For both the 1996 and 2001 zone boundaries, it was impossible to unambiguously index Liverpool Hospital to the correct TZ 360. The most common address for the hospital is Elizabeth St, Liverpool with no street number. However, Elizabeth St spans zones 714 and 360, and contains other major establishments, such as Liverpool Westfield (TZ 714). The index record for 'Elizabeth St, Liverpool, No Number' pointed to TZ 714, as this contains the most employment. Despite a facility entry for 'Liverpool Hospital' being in the index, a large amount of hospital employment still ended up in TZ 714.

As a result of the above difficulties, the majority of Liverpool Hospital employment in 1996 is shown in TZ 714 rather than the correct TZ 360. This situation was significantly improved for 2001, where most of this employment is shown in TZ 360. However, the 2001 data may still retain some level of (unquantifiable) inaccuracy for Liverpool hospital.

TZs 752 and 757 (Kellyville and Castle Hill areas): An error in the 1996 index meant that any address in the range 1-113 Castle Hill Road, Castle Hill was miscoded to TZ 752 rather than the correct TZ 757. This was corrected for 2001. As there is only a trivial amount of actual employment in TZ 752, virtually all of the employment shown in this zone shown in 1996 should be regarded as belonging to TZ 757.

TZs 120, 123, 124 and TZ 859 (Randwick area): The 1996 zone boundaries and index did not sufficiently allow for different ways of reporting the address of Prince of Wales Hospital, resulting in the bulk of hospital employment recorded in TZ 120 (and some in TZ 123), rather than the correct TZ 124. For 2001, TZ 124 was deleted and replaced by a new zone TZ 859, wholly containing Prince of Wales Hospital. This, in conjunction with improvements in the index, meant that in 2001 the bulk of hospital employment was correctly recorded in TZ 859. However, because of reporting ambiguities, there is still some residual hospital employment in TZ 120 that probably belongs in TZ 859.

TZ 5841 (Kangaroo Valley area): In the 2001 JTW, employment in TZ 5841 (SLA 6952), covering the Kangaroo Valley area in Shoalhaven Part B SLA, was mistakenly coded to the adjacent TZ 5832 (SLA 6951). There will be slight discrepancies that will be noted in the SLA totals for SLA 6951 and 6952 between JTW tables that are produced at Travel Zone and those that are produced at SLA level. However, workforce counts for TZ 5841 at the origin end were correctly coded to TZ 5841.

* *Note*: the total counts for these 'unknown/undefined' destinations may include people whose destination is outside the GMA, some may be in the RRNSW area. To avoid overcounting total GMA employment, it is advisable to restrict the scope for the 'Unknown', 'Sydney Undefined' and 'NSW Undefined' codes to persons enumerated within the GMA.

APPENDIX 3 DESTINATIONS IN R&RNSW

Workplace addresses (employment destinations) outside the GMA (referred to as Rural and Regional NSW - RRNSW) were coded to either the broader SLA level as TDC's zonal system is restricted to the metropolitan area. SLAs are generally equivalent to LGAs, but in many cases there are 2 SLAs to an LGA.

For the processing of employment destinations in RRNSW, ABS allowed a further breakdown of area in the case of larger regional centres. ABS coded employment destinations as being within the centre or main part of the SLA or as outside it. These are referred to as Split SLAs and allow the more precise identification of some regional employment centres.

These may not strictly be in RRNSW but are included in the scope of the JTW table when the destination is specified to be in RRNSW.

APPENDIX 4 Mode235 Codes and Equivalence

Mode data in the 2001 JTW tables is provided in the formats of 6, 10, and 14 groupings of 'priority mode' based on the 235 mode combinations supplied by ABS. The relationship between the mode variables is shown below.
