1 Overview

The Sydney Region Carriageway Information contains the number of through lanes. It also contains the width of the through lanes and surfaced width for that particular road.

2 Data Structure

Field Name	Data Type	Field Description
OBJECTID	Number	Unique identifier for an object
TOTAL_THRU_LANES	Number	Number of through lanes at that location
TRAFFICABLE_WIDTH	Number	Width of through lanes (or specified lanes) assigned to moving traffic.
SURFACED_WIDTH	Number	Total width of waterproof surface inclusive of trafficable painted medians and sealed shoulders where applicable
Shape_Length	Number	Length of polyline

3 Notes

- The dataset contains Lane count and pavement width information for roads that are the responsibility of the State Government (gazetted State Roads, which include National/Auslink Roads)

- There are also non-state roads in the dataset, which commonly only contain lengths and no widths

- If there are '0's in the data, it means there are no width information
