1. Introduction

2. Opening Remarks

3. Future Transport Digital Accelerator

4. Mobility as a Service

5. The Challenge

6. Q and A

The MaaS Challenge

How would **you** give customers an ideal **door-to-door mobility service** experience and **seamless combinations** including the first and last mile options?

What's in it for you?

Once-in-a-generation opportunity to be part of the growing MaaS landscape

Seed Funding	Customer Access 13 million Public Transport Customer trips per day	Transport for NSW Promotion Money can't buy promotion of your products
Incubation Support	Amazon Web Services Hosting	Space at Sydney Start-up Hub
Partner Mentoring & Coaching	Exclusive Access to Data & APIs	Access to Transport Experts

transport digital accelerator

Collaborate. Innovate. Activate.

MaaS Innovation Challenge

Transport for NSW (TfNSW) is seeking innovative ideas to help give customers the ideal door-to-door travel experience where they can plan the optimum travel option or combination. Entries for the MaaS innovation challenge open Wednesday 6 June 2018.

2. Opening Remarks

Tony Braxton-Smith
Deputy Secretary
Customer Services
Transport for NSW

3. Future Transport Digital Accelerator

Stephanie Salter

Associate Director

Future Transport Digital Accelerator

Transport for NSW

Future Transport Digital Accelerator

How we do it

People

A core team of experienced Human Centered Designers will guide the business co-design team through the accelerated process

Critical to the success of any initiative going into the accelerator will be the commitment by the business to dedicate subject matter experts to the co-design process who will then take forward the solution into BAU delivery and scale

Collaborating with internal and external SME's is critical

Process

The accelerator process is designed to deliver rapid customer focused outcomes, through collaborative working in co-design teams

It promotes accelerated decision making through rapid ideation and time boxed design sprints, enabling a 'fail fast' approach

To support the accelerator, portfolio management and governance processes will enable visibility and rapid criteria based decision making by co-design teams themselves and the Innovation Leadership Panel

Place

The accelerator space is designed to be different, to promote collaboration and innovative thinking and working

A dedicated space to showcase the ongoing activity and output is critical to building support and momentum

Located in the Sydney start up hub will not only inspire Transport staff, but will enable access to a wealth of talent and capability that would normally be challenging to tap into

Partnerships

Establishing strategic partnerships for each aspect of the end to end process will allow divergent thinking, access to expertise to get the accelerator up and running quickly and to rapidly deliver outcomes without having to go through traditional large scale procurement exercises

Technology providers, accelerators, organisations with expertise in setting up accelerators, data providers and data analytics capabilities are top priorities

Our Process

The Transport Digital Accelerator follows a four-phase approach:

In the "Prioritise" phase we scope the problem and work with business collaboratively to set up the project for success.

Prioritise

Understand

In the "Understand" phase, we conduct exploratory research to gain a clear understanding of the problem from a business, market and customer perspective.

In the "Ideate/Prototype/Solutions" phases we ideate around the defined problem to produce a prototype. The business and customer then provide feedback which is incorporated into the final solution.

Ideate

Prototype

Solutions

Transition

In the "Transition" phase we work with business collaboratively to progress the project into implementation and delivery.

Our Roadmap

Priorities for the Future Transport Digital Accelerator

1	Personalise customer interactions	Integrate and transform digital channels for tailored, two-way interactions	Extend Opal functionality to create a state-wide mobility payment platform	Develop a single integrated account for mobility services
2	Transform the mass transit network	Automate networks and optimise timetable planning, service delivery and performance	Use analytics to optimise end-to-end customer journeys, routes and interchanges	Create the blueprint for highly automated and fully digitised mass-transit networks
3	Foster shared, demand responsive services	Trial on-demand transport services	Pilot a customised service model for regional centers that includes on-demand services	Incubate new ventures that encourage shared mobility services
4	Enable connected, automated vehicle platforms	Activate the Smart Innovation Centre for advanced transport technology	Foster development of the regulatory environment to support automated vehicles	Develop a Blueprint and operating model for automated vehicles on network
5	Create intelligent transport networks, managed with data	Set up a Transport Data Science Incubator and expand Open Data	Trial AI applications that improve network management and/or customer service	Integrate predictive analytics into network asset management and maintenance

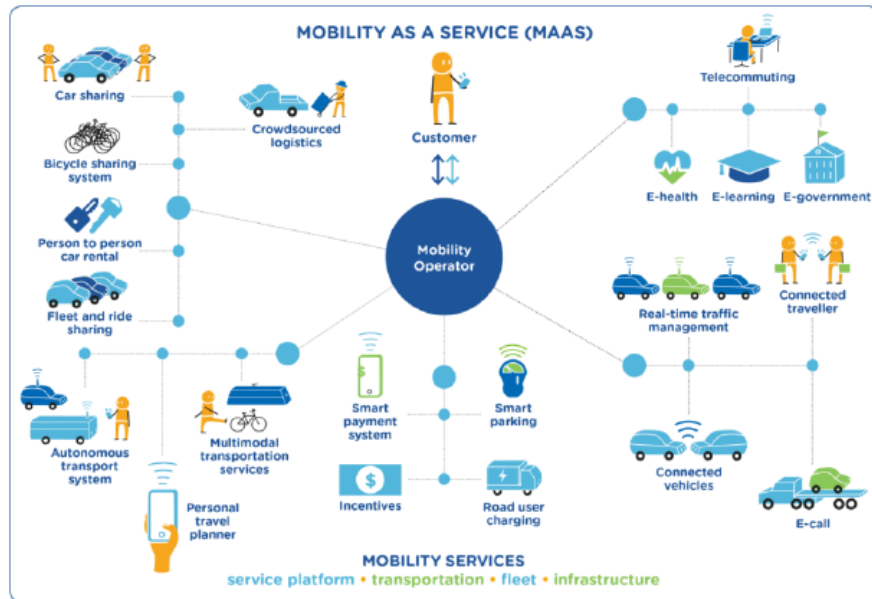

4. Mobility as a Service

Future Transport 2056

TAILORED TRANSPORT

MOBILITY AS A SERVICE (MAAS)

What is MaaS?

MaaS is a dynamic, growing market with small and large players working with their own definitions and visions for what it could and should be.

At its most basic, it's a service that sits between customers and their mobility options with the goal of enabling seamless travel.

MaaS is one of many options for cutting down private car ownership and single person use.

Customer Insights

Car is king

Efficiency and customer experience critical

Different priorities, different solutions

3rd party data exchange

Don't plan for me

Don't know the true cost

Market Insights

MaaS still in pilot phase

No standardised model

First and last mile crucial

Disruption is coming

Innovation is physical and digital

Incentives may be required

Focus areas for TfNSW

- Data – collection and sharing

- Ensuring Customer safety and security

- Regulation that is effective and efficient

- Facilitating trust and building relationships

- Enhancing the PT mass-transportation backbone

- Ensuring accessible Transport – Socio-economic, demographic & geographical

5. The Challenge

Micah Starkis

Director

Open Data, Apps and Feedback Systems

Transport for NSW

Future Transport 2056 – Our Strategic Vision

1. Customer focused

Every customer experience will be seamless, interactive and personalised by technology and big data.

2. Successful places

By having a local focus across New South Wales, we support the growth of communities, places and the economy.

3. Growing the economy

A transport system that powers our State's \$1.3 trillion economy and enables economic activity across the state.

The future of transport in NSW

6. Sustainability

By building a more efficient network we deliver benefit for our environment, economy and wellbeing.

5. Accessible services

Making it possible for everyone to get the most out of life, wherever you live.

4. Safety and performance

The transport network will provide every customer with efficient, safe and secure travel across a high performing network.

Technology Roadmap

My (autonomous) car is (still) king

We're all in this together

Super-commuting with public,
active and shared transport

Why travel so much?

Personalise customer interaction:

Develop digital platforms that provide rich, contextual information, frictionless payment, easy navigation and two-way engagement to customise transport experiences

Transform the mass transit network:

Apply technologies to automate mass transit solutions, improve their efficiency, deliver better service frequency and reduce transit times

Foster shared, demand-responsive services:

Develop flexible and shared-use transport service models based on aggregated demand to meet market needs and extend transport access

Enable connected, automated vehicle platforms:

Support adoption of vehicles and infrastructure that deploy automation to efficiently, reliably and safely move people, goods and services

Create intelligent transport networks, managed with data:

Install technologies and build networks that actively gather data. Use AI and real-time analytics to manage demand, optimise capacity, improve flows and enable better customer outcomes.

The MaaS Challenge

How would **you** give customers an ideal **door-to-door mobility service** experience and **seamless combinations** including the first and last mile options?

Our Vision

A vibrant, open mobility marketplace where providers compete to best meet community & customer needs with compelling alternatives to car ownership.

Mission of sharing data for full network optimisation.

Extend the reach of existing modes of mobility.

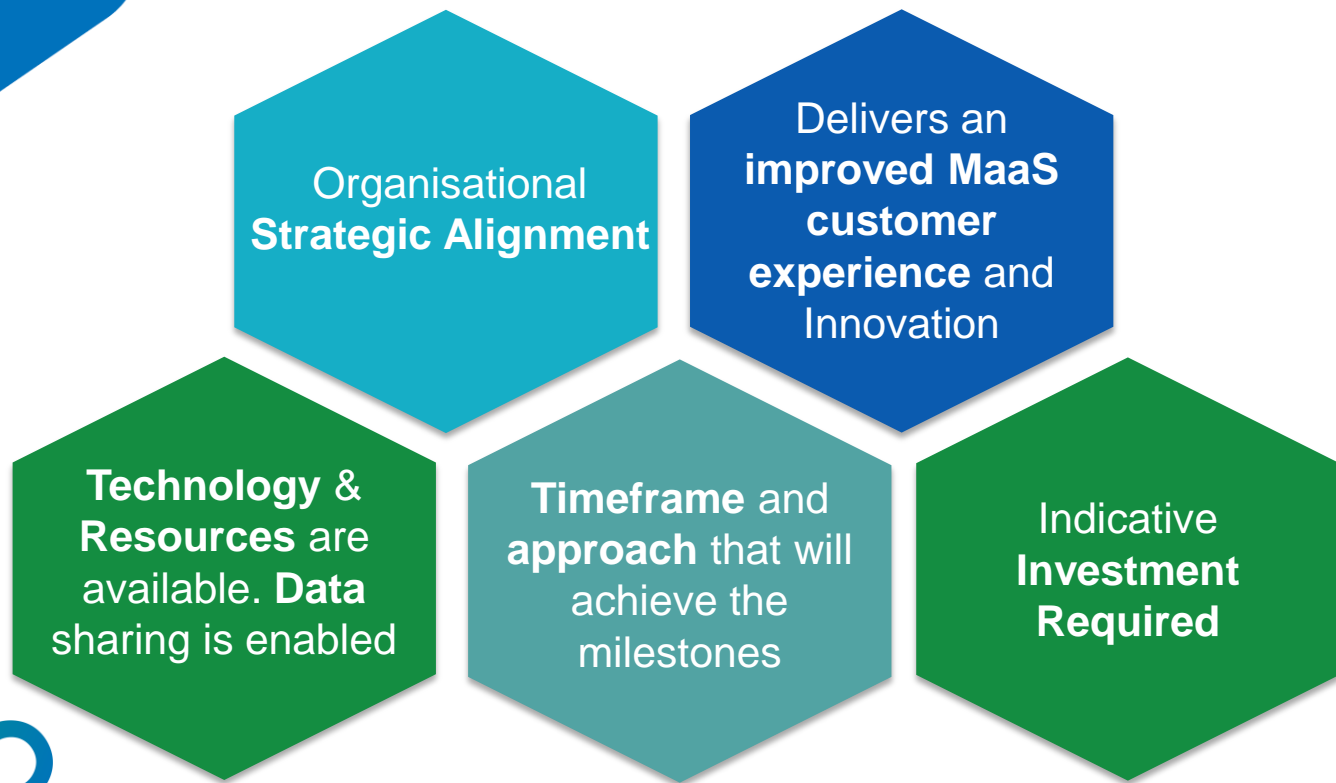

Key Details

- Seed funding pool - determined by solution, customer benefit, impact and TfNSW investment
- Shortlisted submissions progress to later stages and supported incubation
- Eligibility Requirements – refer to the [website](#) for terms and conditions
- Criteria must be addressed
- Shortlist to be invited to pitch

Key Dates

Industry Collaboration Networking session	14 June
Applications Close	9 July
Pitch Day	25 July
Incubation Starts	August
Beta Launch (Pilot)	December

Criteria

Organisational Strategic Alignment

Strategic alignment or demonstrated commitment to delivering improved MaaS customer outcome.

Describe your **strategic capability, interest or commitment** to deliver your MaaS product, solution or service to benefit transport customers.

Please provide an overview of your organisation, business or start-up.

Improved MaaS customer experience

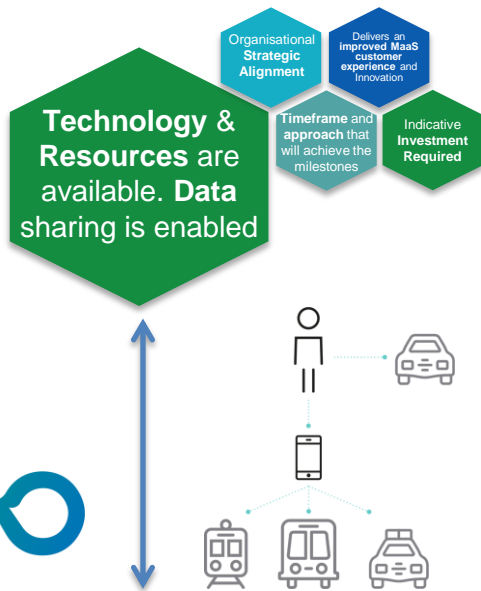

Give customers an ideal door-to-door mobility service experience and seamless combinations including the first and last mile options.

1. Please demonstrate how your solution will give customers an ideal end-to-end mobility service experience and seamless combinations including the first and last mile options.
2. Please describe the transport customers your solution will benefit and how the experience will be improved including greater efficiency achieving a customer value proposition or other benefit to customers or government.
3. Please explain how the product you propose is unique, innovative and differentiated from other products that are available.

Technology & Resource capability and data sharing

Enable shared data to interact with other systems, improve customer information and assisting the effective management of the transport network.

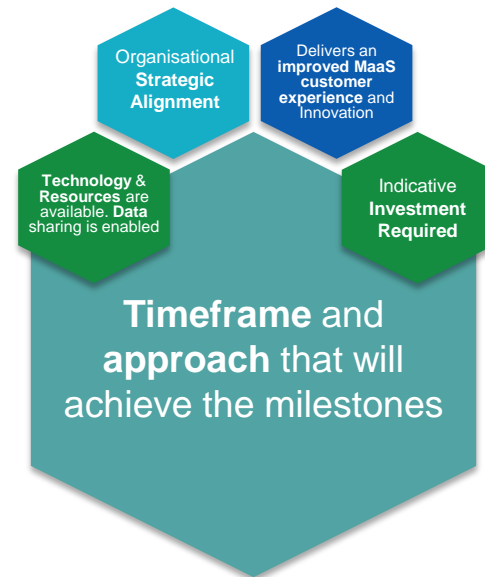

1. Please provide an overview of the key **resources and capability** that will be involved to be engaged of available to deliver the proposed solution.
2. Provide details of the technology required, its state of development, any details of technical integration required with other systems including Transport for NSW systems and what it will take to get it ready for pilot launch.
3. Provide details of your **approach for sharing data**. How your data can be used effectively across within the MaaS ecosystem, interact with other systems, **improve customer information** and assist the **effective management of the transport network**.

Timeframe & Approach to achieve the milestones

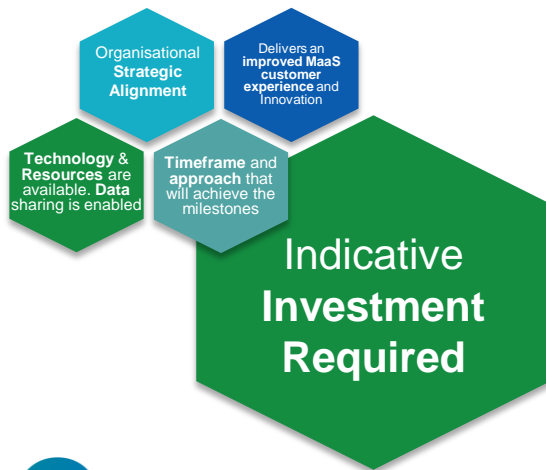

What is the feasible approach that will deliver your product, service or solution ready for a customer pilot?

1. Please describe the approach and timeline you will take to get your product, solution or service ready for a customer pilot.
2. Explain the roles and responsibilities you need to deliver your product, solution or service. Include the activities to be performed by TfNSW and the expected timeframes.

Indicative Investment Required

The Seed funding and investment by Transport for NSW required to deliver the products, service or solution and it is best value for Government.

1. **Indicative the seed funding** required and how it is the best investment for government.
2. Please describe the commercial model that will **make the solution commercially sustainable** and/or best value for money for government.
3. Please indicate other areas needed to deliver your solution like **data, people, funding and other support**.

Industry Networking Event

Thursday 14 June 2018 3 – 5pm

The industry networking session is an event that will provide opportunities to meet and potentially engage or partner with other organisations or teams to improve your submission for the MaaS Innovation Challenge.
